

Pricing Policy

At TankBuilder, we are committed to delivering transparent, competitive, and accurate pricing for our custom vessels and related services. The following outlines our pricing structure and terms of quotation.

1. Quotation Validity

- All quotations issued by TankBuilder are valid for 30 days from the date of issue.
- After this period, prices are subject to review and potential adjustment due to material, labour, or transport cost changes.
- For extended quote validity beyond 30 days, the customer must request this in writing, and approval is subject to TankBuilder's discretion.

2. Pricing Inclusions

Unless specifically stated in your quote, our standard pricing includes:

- Custom tank design based on customer specifications
- 3D model and technical documentation
- Manufacturing and standard quality control checks
- Delivery, provided a valid delivery location is selected during the ordering or quotation process
 - If no delivery location is specified, pricing defaults to Ex Works (EXW) from our facility

Important:

- No accessories (e.g., valves, Air vent, immersion, etc.) are included unless explicitly listed in the quotation.
- Offloading, HIAB/crane hire, and forklifts are not included and must be arranged by the client or quoted separately upon request.
- Pricing includes 'Non Destructive Testing' required within code. Additional NDT priced separately.

3. Custom Requests and Variations

Pricing Policy

- Any post-quote changes to the design, materials, or delivery details may require a revised quotation or additional charges.
- After an order is confirmed, changes may result in variation charges or production delays.

4. Currency and Taxes

- All prices are provided in Euro (€) unless otherwise stated.
- VAT is not included in base pricing and will be applied based on jurisdictional requirements.

5. Errors and Omissions

TankBuilder reserves the right to correct any clerical, typographical, or pricing errors before a sale is finalised, even after a quote has been issued. Technical changes may take place when necessary during the manufacturing process.
